

Kill A Watt Electricity Monitor Kit

Clatskanie People's Utility District

Feeling environmentally conscious? Worried about energy costs? Would you like to cut down on those costs by finding out which of your appliances, lamps and computers, etc. are actually costing you the most? We can help you do just that! Come by the PUD office and check out a Kill A Watt P4400 electricity usage monitor. We provide this service "free of charge" for a full week.

All you have to do is plug the Kill A Watt monitor into the wall circuit and plug your appliance, lamp, computer or any other electrical device into it. The monitor will measure the efficiency of your electrical devices. The Kill A Watt's easily-readable LCD displays all meter readings: Volts, Current, Watts, Frequency, Power Factor, and VA. The unit will start to accumulate KWH and powered duration time (hour) after power is applied.

You can calculate electrical expenses while checking the quality of your incoming power by monitoring the voltage, amperage frequency and power factor. Now you'll know if it's time for a new appliance, or whether new items touted as "energy saving" are actually doing their job.

**Kill A Watt
Monitor**

Call us to borrow a Kill-A-Watt electricity usage monitor kit. Checkouts are limited to 7 days.
